<b>PREFACE.....</b>	<b>v</b>
<b>EDITOR.....</b>	<b>vi</b>
<b>SECTION 1: INTELLIGENT CONTROL SYSTEM .....</b>	<b>5</b>
<b>Chapter 1 .....</b>	<b>6</b>
<b>Working Principle and Operating Mode of Atomic Force Microscopy</b>	
Iskandar Al-Thani Mahmood	
<b>Chapter 2 .....</b>	<b>13</b>
<b>Design and Development of controller of Active Power Filter for Industrial Usage part 1</b>	
M.M.Rashid <sup>1</sup> , N.A.Ramin <sup>2</sup> and Zahurul <sup>2</sup>	
<b>Chapter 3 .....</b>	<b>21</b>
<b>Design and Development of controller of Active Power Filter for Industrial Usage part 2</b>	
M.M.Rashid <sup>1</sup> , N.A.Ramin <sup>2</sup> and Zahurul <sup>2</sup>	
<b>Chapter 4 .....</b>	<b>30</b>
<b>Design and Implementation of Instant Noodles Vending Machine</b>	
M.M.Rashid	
<b>Chapter 5 .....</b>	<b>39</b>
<b>Development of Intelligent Belt Conveyor System (Part 1)</b>	
M. M. Rashid, Faruok Alliays	
<b>Chapter 6 .....</b>	<b>45</b>
<b>Development of Intelligent Belt Conveyor System</b>	
M.M.Rashid, Faruk, M J E Salami	
<b>Chapter 7 .....</b>	<b>50</b>
<b>Anti Skid Control System, A Tutorial</b>	
M. J. E. Salami, A. M. Aibinu, A. F. Salami and Mohd Sofian Bin Basrah	
<b>Chapter 8 .....</b>	<b>54</b>
<b>Design and Prototyping of Inertia Wheel</b>	
W. Astuti, A. R. Kasim, M. I. Solihin, A.M. Aibinu, Momoh Jimoh E.Salami and Wahyudi	
<b>Chapter 9 .....</b>	<b>62</b>
<b>Control of Automatic Drilling Machine by PLC</b>	
Md Mozasser Rahman, Najiah Md Zain @Abdul Rahman and Mohd Syazwan Bin Jamil	
<b>Chapter 10 .....</b>	<b>74</b>
<b>Automatic Storage and Retrieval System</b>	
Abdul Kadir Abdul Jabar Abdul Kadir, M. J. E. Salami and A. M. Aibinu	
<b>Chapter 11 .....</b>	<b>80</b>
<b>Control of Unmanned Underwater Vehicle</b>	
Raisuddin Khan <sup>1, a</sup> , Faried Hasbullah <sup>2, b</sup> and Masum Billah <sup>3, c</sup>	
<b>Chapter 12 .....</b>	<b>85</b>

## **Adaptive Sliding Mode Control for 3dof Helicopter**

Mostafa A. Hamood<sup>a</sup>, Rini Akmeliawati<sup>b</sup>

**Chapter 13** ..... 93

## **Backstepping Control of an Autonomous Quadrotor**

Norafizah Abas<sup>1</sup>, Rini Akmeliawati<sup>2</sup>

**Chapter 14** ..... 103

## **Piezoelectric Tube Scanner in Atomic Force Microscope**

Iskandar Al-Thani Mahmood

**SECTION II : INTELLIGENT CONTROL SYSTEM DESIGN** ..... 111

**Chapter 15** ..... 112

## **A Review on Control of Two-Wheeled Wheelchair System**

Salmiah Ahmad<sup>1, a</sup>, M. O. Tokhi<sup>2, b</sup>

**Chapter 16** ..... 121

## **A Smart Car Surveillance System using Programmable Logic Controller (PLC)**

Siti Fauziah Tohaa and Mohammad Zafran Haja Mohideen

**Chapter 17** ..... 128

## **Design of Controller for Elevator Group Using Fuzzy Logic Part 1**

M.M.Rashid, Azhar

**Chapter 18** ..... 133

## **Design of Controller for Elevator Group Using Fuzzy Logic Controller Part 2**

M.M.Rashid, Azhar

**Chapter 19** ..... 139

## **Fuzzy Logic-based Intelligent Control of Flexible Link Manipulator**

Ismaila B. Tijani and Rini Akmeliawati

**Chapter 20** ..... 148

## **EEG based robot control**

A. Khorshidtalab and M. J. E. Salami

**Chapter 21** ..... 158

## **Visual-Based Intelligent Solar Tracking System**

Rini Akmeliawati\*, Samir A. Abdul Kareem, Riza Muhida

**SECTION III: INTELLIGENT SYSTEM DESIGN** ..... 172

**Chapter 22** ..... 173

## **Intelligent Air-conditioning System**

Amir A. Shafie, Raisuddin Khan, H. Al-haieaid M. Ebrahim

**Chapter 23** ..... 179

## **An Intelligent Car Surveillance System: Design and Tools Selection**

Siti Fauziah Toha<sup>3</sup> and Mohammad Zafran Haja Mohideen

**Chapter 24** ..... 185

## **Automatic Pipe Bursting Monitoring System**

M. J. E Salami, Syed Ahmed @ Hla Moe Win

<b>Chapter 37 .....</b>	<b>292</b>
<b>Kernel PCA – An Introduction</b>	
Hamza Baali <sup>1,a</sup> , Momoh-Jimoh Eyiomika Salami <sup>2,b</sup> , Rini Akmeliawati <sup>3,c</sup>	
<b>Chapter 38 .....</b>	<b>297</b>
<b>System Modelling of a Twin rotor System: Time and Frequency Domain Analysis</b>	
Siti Fauziah Toha <sup>1,a</sup> and M. O. Tokhi <sup>2,b</sup>	
<b>Chapter 39 .....</b>	<b>304</b>
<b>System Identification Technique for a Helicopter Using Genetic Algorithms</b>	
Siti Fauziah Toha <sup>1,a</sup> and M. O. Tokhi <sup>2,b</sup>	
<b>Chapter 40 .....</b>	<b>311</b>
<b>Advanced Noise Removal Techniques for the Detection of EMG Signal</b>	
Md. Rezwanul Ahsan <sup>1,a</sup> , Muhammad Ibn Ibrahimy <sup>2,b</sup> and Othman Omran Khalifa <sup>3,c</sup>	
<b>Chapter 41 .....</b>	<b>322</b>
<b>Active suspension system: Part 1 - Mathematical Modelling</b>

#### **22.1 Introduction**

In both commercial and private buildings it is common to control room temperature with single heating, ventilating, and air-conditioning (HVAC) unit and controller. Systems configured this way are most commonly controlled with a single sensor in one of the rooms. The controller gets the temperature reading from one of the sensors, and supplies heating or cooling to all other parts of the rooms proportionally.

This method assumes that all parts of the rooms have the same load all the time, and therefore the same temperature throughout. This is often a poor assumption, which leads to discomfort and more energy consumption than necessary. The reason for controlling room temperature with a single controller and a single sensor is cost.

It is expensive to install a separate HVAC unit and controller for each part of room. It is also expensive to install temperature sensors in every corner of the room, primarily because of the cost of running wire to the sensors. New technology, particularly wireless sensor technology, offers the opportunity to significantly reduce the cost of sensors such as those used to control space temperature in commercial buildings and private homes. However, the actuation parts of the system will still be expensive for the foreseeable future.

In this paper, investigation on the potential benefit of replacing a single temperature sensor used to control temperature in a room with a sensor network that provides one sensor per area of the room.

However, the actuations do not change. There is still just one controller and one HVAC unit for the room. To our knowledge, the energy and comfort implications of this problem have not been analyzed. Most multiple sensor control problems have focused on fault tolerance [1] or multi-target problems [2, 3].

The problem addressed in this paper is like a multi-target problem where not all of the targets can be satisfied since there is one actuator. The focus of the paper is on how to make use of the additional information available from the network of sensors, and an evaluation of how different methods of using the information affect energy performance and thermal comfort.

In this paper a system to analyze the effectiveness of multiple-sensor configuration is laid out. The system is designed to be implemented by any air-conditioning system that has integrated vane system to direct air-flows from the air-conditioner[6]. It can be aimed at optimizing comfort, or minimizing energy consumption subject to constraints on comfort.

The next section describes the set-up of the experimental system after a brief statement about the objectives of this project. The subsequent section describes the hardware implementation of the system. In the next section the results of the experiment and its analysis are presented.

This project aims at developing and implementing an intelligent air-conditioning which is effective as well as reliable to meet human comfort. The emphasis during the development process will be laid on the efficiency of the system to minimize the time the actuator is switched on. The human comfort for this part of the project will be to ensure an even
